

FLORECER

CONSTRUCTION OF GREEN WALLS WITH RECYCLED PLASTIC PLATES

AUTOR: MATILDE MARTINEZ

1 First you need to have the recycled plastic plate.

According to the drawn pieces you need to cut them in a CNC cutting machine, the following images are the development of the gutter and the frame:

Gutter

Frame

NOTE: Reduces and cuts are needed to be considered in the drawings to be cut to later assemble the pieces.

2

Second you have to bend the gutters and put a screw in them to maintain the shape of the gutter. You need to have 4 gutters per frame.

Assembled gutter

Assembly of the 4 gutters and the frame

3 Once the gutters and frames you want are assembled, it's time to install them on the wall.

You need to place some anchors in the wall to support the green wall

The frame begins to be attached to the wall

Adjust the screws with a screwdriver so that it is fixed

4 The number of modules that are desired are installed

Installed modules

The plants begin to be put in the gutters

Finally you finish the installation of your green wall
